## CribMaster Accu-Cab

Imagine your employees walk up to a cabinet that stores tooling, maintenance parts, kits or even haz-mat materials. Like all of our CribMaster point-of-use devices, the employee is required to identify himself or herself. The door unlocks using an electro magnetic lock and inside are shelves that contain the items they need to complete their task. Each item is identified with a passive Gen2 RFID tag and when the item is removed, inventory is automatically adjusted and monitored through CribMaster.

The Accu-Cab is a great solution for managing kits at point-of-use, tracking the usage of durable items, or tracking maintenance items to work orders and tasks. The only additional step to employees is identifying who they are by a password on the touch screen or a bar-code scan. No inventory to scan or transactions to log. Transactions are automatically recorded when inventory is removed from the cabinet.

*The CribMaster Accu-Cab brings many functions, features and benefits to your shop floor:*

- Simple "plug and play" self contained RFID device (COTS)
- Touch screen control allows for User ID log in
- Configurable shelving to accommodate different size items
- Total kit tracking and replenishment process tracking
- Lot number and expiration date tracking and notification
- Ability to remove an entire bin of items and retain high accuracy
- Durable 100% made in the USA 16 gauge steel construction
- Direct e-mail or EDI communication with suppliers
- 170+ standard CribMaster reports with scheduling
- Custom report configurable with Crystal Reports
- Complete work order system and ability to track inventory to work orders
- Item reservation and predictive ordering
- Reduced mis-use of inventory
- Improved inventory accuracy

# Accu-Cab RFID

RFID Point of Use Dispensing

ToolClarity

There are endless possibilities for product and tagging within the Accu-Cab. The cabinet can hold both large and small items as well as durable, expendable (or consumable) and even serialized items. A common question with this cabinet is how to tag the many types of product that go inside it. Here are a few examples of product that could be in the Accu-Cab, and how we would suggest tagging it.

**A.** On this shelf you will see a number of expendable items, including ear plugs, tape, coveralls, safety glasses, and so on. Each item is tagged with a laminated RFID tag, which is attached to the product with a green sticker. The sticker allows the worker to remove the tag and place it in a "mailbox" to be replenished or reassign it to another item or affix it to the replacement product.

**B.** Here we have hung a few types of work gloves. The gloves are clipped to a hanging wire where they can be easily grabbed off, and again, the tag is attached with a green sticker for reusability and replenishment.

**C.** As you can see on this shelf there are many organizational bins. We chose to demonstrate insert boxes in these bins, each with a removable tag.

**D.** In this situation the bottom shelf is designated for kits. There is a green side for complete kits that are ready to be issued and a red side for kits that have been returned and need to be replenished. Each kit has a removable RFID tag inside the box.
